

## The little tablet with the knockout blow

**Bio8** the little tablet with a knockout blend of probiotic bacteria and sustaining compounds will go to work digesting organic waste and eliminating odour for up to a week, the moment it comes into contact with water. By encapsulating environmentally friendly bacteria in a dehydrated medium, Jayline have delivered a safe practical and lasting approach to domestic and commercial waste situations.

### Benefits

- Simple convenient application
- Safe natural and environmentally sustainable approach to controlling waste problems
- Effective odour reduction
- Dramatic cost saving over conventional liquids, plumbing and pump-outs
- Biological breakdown of fats, oils, grease, proteins and starches in wastewater
- Reduce sludge in sewage systems, fat build-up and blocked drains

### Features

- A concentrated dry culture bound in tablet form means its safe to handle, easy to store.
- Designed to release “good” bacteria for an extended period.
- Accelerates the degradation of proteins, fats, oils & greases.
- The traditional liquid form was expensive to transport and bulky to store.
- Long shelf life - begins only when re-hydration occurs.

### Where

- Apply to discharge water, low lying drains, grease traps
- Septic systems, leach drains, grey water systems, storm water collection tanks
- Boat bilge water, compost systems
- supplement an over worked bio-reactor (like a Bio Max)
- Urinals

### Why

- Bio8 is a stabilised microbial tablet containing naturally occurring bacteria to aid biological breakdown of organic waste
- Set to work in the bottom of the holding tank, pond, reservoir – reducing the solids and bio mass.
- The microbial strains in Bio8 are the result of extensive and ongoing research that has resulted in effective bio remediation of human, animal, and commercial wastewater.

## The little tablet with the knockout blow

### Summary

#### **Environmentally sustainable**

The Bio8 tablet is a combination of “good” bacteria and a sustaining compound to insure the bacteria thrive in those oxygen depleted anaerobic septic system and grease traps. Applying probiotics replenishes the microbes taken out by cleaners, antibiotics and over worked waste systems, thereby restoring the natural balance.

#### **Save time**

Allow Bio8 controlled release to work its way into the waste stream over an extended period. Effective odour reduction, sustainable waste control and no fuss application. KISS - kept it simple stupid!

#### **In any weather**

Odour and waste problems can stem from a range of factors including a change in weather. Bio8 can be conveniently stored between outbreaks and applied as required. Works in any weather, hot and cold.

#### **Avoid expensive remedies**

Compared to the cost of liquid solutions or plumbing callouts this is a no brainer! Unblock drains from fat and sludge build-up (but not physical impurities). But more than the dollar saving is the long term advantage of using an environmentally sustainable approach.

## **Septics and Wastewater**

*Offensive odour, soggy leach fields, blockages, expensive pump-outs, septics can't keep up with load*

### **BIO8**

*Contains multiple strains of bacteria that will re-hydrate and bloom out on contact with wastewater*

*Tablets have sustaining compounds to feed the BIO8 strains and indigenous bacteria*

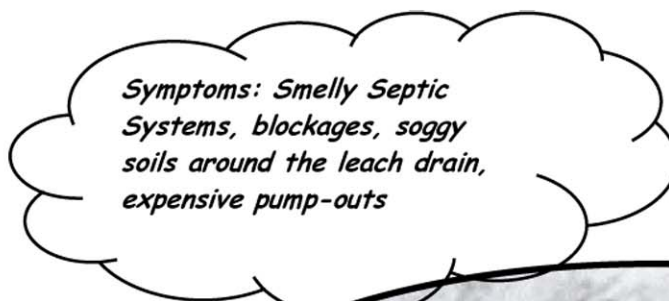

*The result is that the microbial state is restored. Beneficial bacteria can go to work metabolising all built up waste and reduce odour.*

*Simple As! Environmentally friendly. BIO8 - nature's remedy to odour and waste control.*

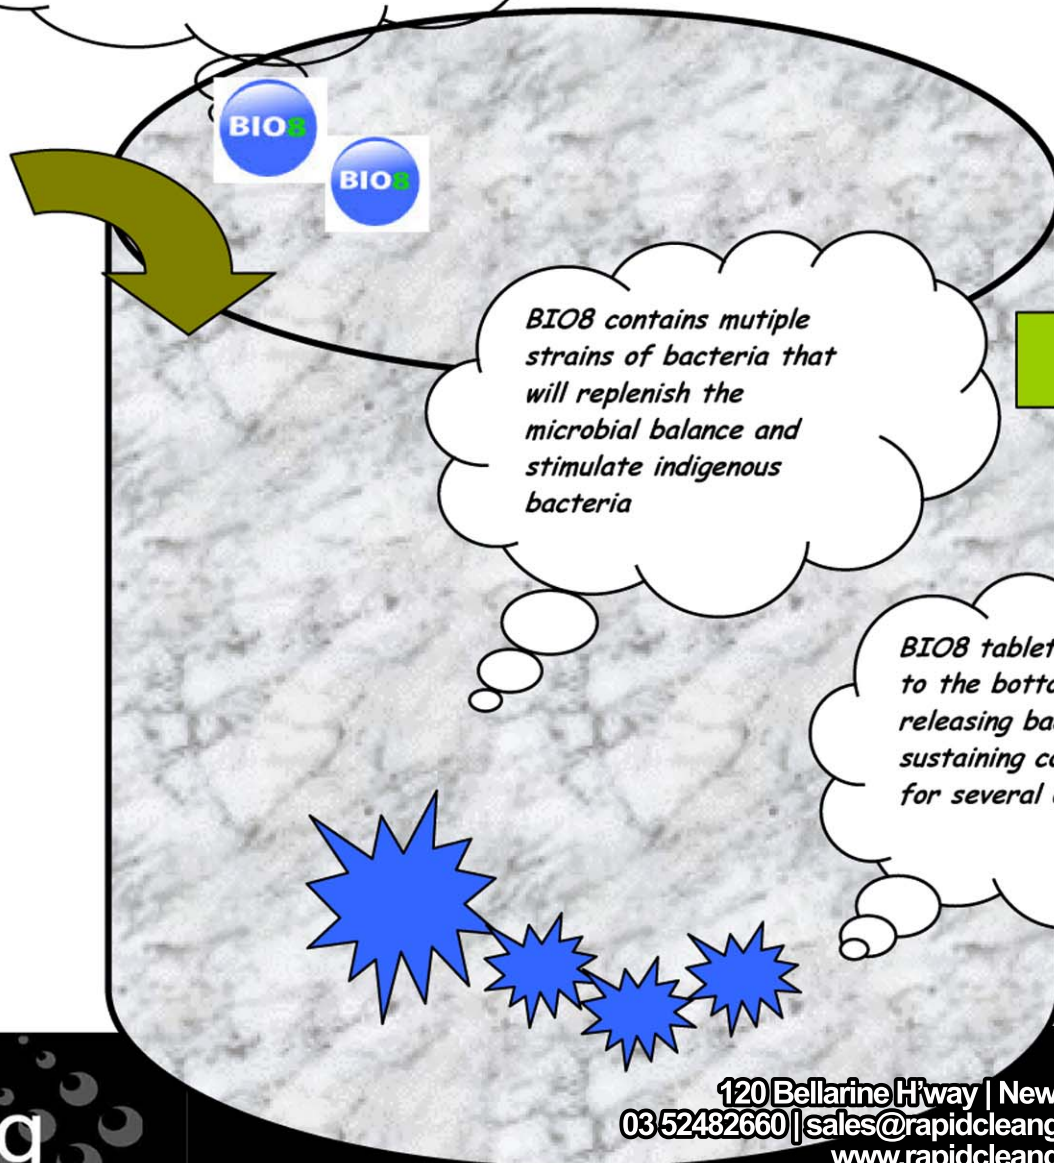

Available from...

# Geelong

*Symptoms: Smelly Septic Systems, blockages, soggy soils around the leach drain, expensive pump-outs*

*BIO8 contains multiple strains of bacteria that will replenish the microbial balance and stimulate indigenous bacteria*

*BIO8 tablet descends to the bottom releasing bacteria and sustaining compounds for several days.*
